EDUCATION

University of Michigan

Bachelor of Science in Computer Science, Minor in Entrepreneurship

May 2028

Ann Arbor, MI

EXPERIENCE

Software Engineer Intern

Method Financial

May 2026 – Aug 2026

New York, NY

- Migrated search engine from **Algolia** to **Typesense**, improving query speed and saving over **\$230,000/yr.**
- Architected a durable indexing pipeline (**SQS FIFO** to **Typesense**) processing **40M+ events/day**, with a **MongoDB** dead-letter store and retry job that decoupled writes from search and cut indexing error rate to practically 0%.

PROJECTS

Kodisc | *Next.js, Azure, PostgreSQL, Prisma, tRPC, Stripe, Python, Docker*

Jan 2025 – Present

- Developed a full-stack **AI-driven video generation** platform, supporting **4,000+ users** across **20+ schools**.
- Built the API behind **3,000+** video requests/month, rendering in **Docker** containers on **Azure**.
- Reduced error rates by **80%** with **AI-driven RAG pipelines** and curated a dataset of **2,000+** code snippets and **1,000+** documentation pages.

LWS | *Zig, TypeScript, Next.js, tRPC, HTTP, AWS*

- Built a local **AWS clone** in **Zig** running **SQS, S3, and DynamoDB**. It has the exact same API, so existing **AWS SDKs** **work against it unchanged**.
- Wrote the **threaded HTTP server**, config parser, and logging from scratch. Each service is its own binary; a **Zig CLI** runs, stops, and tails them.
- Shipped **macOS** and **Linux** builds (amd64/arm64) behind a one-line installer, plus a **Next.js** + **tRPC** dashboard.

Maylang | *C, cJSON, GitHub Actions*

- Built a programming language in **C** — hand-written **lexer, parser, AST, and tree-walking interpreter**, with scopes, first-class functions, and imports.
- Added 6 types, a **bash-style pipe operator** (**sqrt(52) | floor | toString | print**), and a standard library covering **io, math, string, fs, and http**. Wrote the docs site **in the language itself**.

Draft1 | *Next.js, Azure, PostgreSQL, Prisma, Stripe, WebSockets, Docker*

Dec 2024 – Present

- Launched an **AI-powered** college admissions platform offering **10+ tools** that helped students gain admission to **Stanford, Notre Dame, UMich, and other top schools**.
- Built an end-to-end advisor management dashboard handling **bookings, payments, and payouts** via **Stripe Connect**, alongside performance analytics and a **WebSocket-based real-time collaborative essay editor**.
- Engineered an integration layer connecting advisor workflows to **Slack, Calendly, Cal.com, DocuSign, and Google Docs/Sheets/Calendar**, automating scheduling, document signing, and client communication.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, Zig, Java, SQL

Frameworks/Libraries: Next.js, React, Node.js, Express, Hono, tRPC, Tailwind CSS

Databases/Data: PostgreSQL, MongoDB

Tools/Cloud: Git, Docker, Terraform, AWS, Azure, Google Cloud
